An Advertisment to the Reader.

Here have been many good Lawes and Statutes made to limit the excesse, and to dull the teeth of this devouring monster usury; whereof some have simply forbidden it, others have limited it to a certaine rate, beyond which it may not passe. And among this latter sort of Statutes, is that of, *Anno Jacobi 21 cap. 17* wherein it was enacted, That no person whatsoever from, and after the 24 day of June Anno Dom. 1625. upon any contract to be made shall take directly or indirectly, for the forbearance of money, &c. above the value of 8 li. for the forbearance of 100 li. for a yeare, and so after that rate for a greater or lesser summe, or for a longer or shorter time, which Statute was perpetuated *Anno Caroli 3. cap. 4.* According to which Statute, I have calculated certaine proportionall numbers, both for time lesse, and also for time greater then a yeare: And that both for the Forbearance and also for the Discompt of money, wherein I have varied from the ordinary practice of divers who deale in interest, and likewise from those erroneous Tables framed by some upon false grounds (as they who are versed in *Geometry* well understand) and have produced such numbers as doe not onely answer the letter of the Statute, but are also consonant to truth and rules of Art: which may appeare in this, that the numbers are so proportioned as that any sum being put forth by them for any time how great or

An advertisement

little soever, yet there shall arise profit to the owner thereof, but after the rate of 8 li. in the 100. for a yeare which is the limitation of the Statute. Now this will not be done by dividing 8 li. (the interest of 100. for a yeare) into 12. equall parts after the erroneous ordinary way, and making those equall parts the interest of 100 li. for the 12 moneths of the yeare: for then by like reason for any time greater then a yeare, we should multiply 8 li. the annual interest of 100 li. by the time or number of yeares of the forbearance, and the product should be the interest of 100 li. so long forborne, But this is most dissonant from the principles of Art, neyther have any in their tables or Breviats of interest so proportioned them, but as for all time greater then a yeare, their numbers are in continuall proportion so for time lesse then a yeare their numbers ought to be in the same continuall proportion also, because the limited rate in the Statute is but one and not divers, and that for all times eyther on this side or beyond the period of a yeare, whereas the ordinary erroneous way (used only for time lesse then a yeare) of dividing the interest by the time, doth make as many severall rate of interest, as the time of forbearance are different: and by comparing truth with error it will most evidently appeare that in all time lesse then a yeare, their number answering thereto, doe much exceed the truth, and by how much the time of forbearance is diminished by so much the more is the rate augmented beyond its bounds. So that he, that for the forbearance of 100 li. for 6 moneths takes 4 li. for the forbearance thereof, takes not after the rate of 8 li. per *Annum*, but after the rate of 8 li. 3 s. 2 d. and he that for 3 moneths time takes 2 li. take after the rate of 8 li. 4 s. 0 d. And so likewise he that for a moneth takes a marke (as commonly men use to doe) takes almost

most after the rate of 8 li. 6 s. per Annum, as may appear
page 8. And if the rate or reason of interest or the sum
of money for which interest is taken were augmented
the more & more notorious would the error be found.
Neither doe these erroneous differences arise out of
their practicall tables of forbearance onely, but the like
in as great a disproportion may be found in the tables
of discount (or rebatement) so that for all time lesse
then a yeare he that payes by them payes too little, and
for all time greater then a yeare too much, for the debtor
that Discounts by them for 6 months (that is payes his
money 6 months before it be due) whereas for 100 li. he
should pay 96 li. 4 s. 6 d. these tables makes it but 96
li. 3 s. 1 d. which is too little by 1 s. 5 d. And hee that
payes upon Discount by them for a yeare and 6 mo-
neths, for the like summe of 100 li. shall pay 89 li. 5 s.
7 d. which ought to bee but 89 li. 1 s. 11 d. payes too
much by 3 s. 8 d. and if for 36 moneths (which is 3
yeares) he then payes too much by 1 li. 5 s. 3 d. which
in so small a sum is no small difference. Which errors I
have in these ensuing tables reformed, making the num-
bers from the first grounds so accurate as that the least
damage cannot accrew, eyther to the creditor or
debtor by the use of them.

And that these Calculations or Tables and Breviars
so Calculated are agreeable to truth, I have not onely
Art and reason siding with me, but also the consent and
testimony of most able Artists. As we may see by that
learned and great maister of proportions Mr. Henry
Briggs in his *Arethmetica Logarithmica* cap. 17. where
he sheweth how betweene any two numbers given to
find out any number of meane proportionals and par-
ticularly applyeth them to questions of interest, upon
whose grounds Mr. Edmund Wingar hath written an

An advertisement.

Appendix of interest added to his booke of Arithmetick, And the like reason is obserued by *Etischiel Daecker* of Rotterdam, in his booke of interest, the uses whereof were set forth in English, by my worthy good friend *Mr. Richard Leaver*, the numbers whereof are in the same continued proportion that these following numbers are. To these I may adde the testimony of *Mr. Witt* in his booke of Annuities, *Quest. 43.* where he sheweth that if 100 li. be forborne for 6 moneths at 10 *per Cent.* it will amount unto 104 li. 17 s. 7 d. and not 105 li. as most would have it; and the like reason is obserued by him in many other Questions. And with these agree *Mr. Spidel*, in his booke *Arithmeticall questions* on the last of practise where he sheweth that if 1549 li. 14 s. 5 d. be forborne for 7 moneths and 19 dayes at 7 *per Cent.* the interest will not amount unto 69 li. 0 s. 1 d. (as there the answer according to the common way is giuen) but 68 li. 1 s. 5 d. as according to truth he there shewes it ought to be, which latter answer is lesse then the former by 18 s. 8 d.

But it may be objected that the tables so much inueighed against, are to be vnderstood of *Simple interest*, and not of compound interest, as these tables are.

To this I answer that their simple interest (as they practise it) is greater then compound and therefore is not so simple as they would seeme to make it: Again I answer that properly ther can be no compound interest for time lesse then a yeare: For if a yeare be the limited time, according to which the proportion of interest is stinted or set (I say in respect of time) then can there be no compounding of interest untill that time be fully runne out and expired: But a yeare is the set or limitted time for the proportion or reason of interest: Therefore there can be no compounding of interest

un-

to the Reader.

untill the full period of a yeare be expired. Now if there be no compounding of interest but for time greater then a yeare, then of necessity it followes, that there can be none for part of a yeare, and consequently my tables for time lesse then a yeare cannot be understood of compound interest. For in all time lesse then a yeare interest is but increasing or rising to his proportioned profit in his limited or set time, to which it doth not arise by iumpes and startes of equall profit in equall time, but by the Law and reason of proportion, which will not allow that 100 li. in 6 moneths, which is halfe the time, shall augment it selfe to 4 li. which is halfe the profit or increase, for if it be so, then shall 104 li. for the other 6 moneths raise it selfe unto above 108 li. and therefore the first 6 moneths ought to increase onely so much as being let out or continu-

100, 104, 108, are not proportionall numbers, for if their right lines or numbers be proportionall, the rectangle figure made of the extremes is equall to the square made of the meane by the 17 pro 6, & 20 pro. 7 Eucl. but in these three numbers the rectangled figure made of the extremes is lesse then the square made of the meane. Therefore these three numbers are not proportionall.

ed with the principall for the rest of the yeare shall increase to neyther more nor lesse then 108 li. for the whole yeare. And this is that reason of proportion that is observed in these following tables, as may appeare page 9. Where 100 li. is supposed to be let out for a moneth and the use thereof taken and let out againe with the principall from moneth to moneth through all the 12 moneths of the yeare shall at the expiration of the time augment it selfe to 108 li. agreeing precisely with the Statute. And this may serve for an illustration of the truth of these tabular numbers which are for time lesse then a yeare. Whose uses I have briefly shewed in some few questions and thereto added the

Bre.

An advertisement, &c.

Breviats for time greater then a yeare, and also the Breviats for Annuities, with their uses in severall questions: whereto I have also added some other Breviats at 5, 6, & 7 *per Cent.* which with the former I commend to their friendly acceptance that shall have occasion to make use thereof, and for this time rest,

At my house in *Vine-Court*
Golding-lane, this 13 of
Novemb. 1632.

THE SCALE OF INTEREST.

Of the Tables of Interest.

BEFORE I come to the Questions of Interest, it will be needfull that I shew you the construction of the Tables, that so vnderstanding what they are, their vse may be the better and more easily vnderstood.

The Tables therefore (as you may perceiue) in euery Page haue seuen Columnes.ouer the head of the first is written, *Principall*; and in this Columnne, you are to seeke the Principall of any Summe, for which Interest is to be accompted, whole first and greatest number is 1000: which numbers diminish downeward; first, by Hundreds; secondly, by Tennes; thirdly, by Vnits of Pounds; fourthly, by Vnits of Shillings, beginning at 10. s. And last of all, you haue one Penny in a rowe by it selfe. So that here you may take the Interest of any Summ: whatseuer: for if the Summe be greater then 1000. li. whole Interest you seeke, you may double or treble the Interest of 1000. li. or as cause shall require. The rest of the Columnes haue in them the Interest of the seuerall Summes against which they are placed, and haue their proper Titles of Time placed ouer the head of euery Columnne, beginning with 1, 2, 3, 4, 5, 6 dayes; and so continue in the other Pages vnto 30. dayes, which is almost a moneth: which taken strictly for the twelfth part of the common *Iulian* yeare, consisting of 365. dayes, 6. houres; is 30. dayes, 10. houres, 30. minutes; but we take the moneths as they are diuided to our hands, though some haue more, and some lesse dayes in them.

The Scale of Interest.

After the Tables for *Dayes*, follow the Tables for *Moneths*, beginning at one Moneth, and so continuing to twelve Moneths, which is a yeare: so that out of these Tables for *Moneths*, and those of *Dayes* (before spoken of) you may take the Interest of any summe of money for any time that is not greater then a yeare: remembering alwayes, that what Interest is accounted for any Principall, is to be added to the Principall for the Loane, or forbearance thereof, for the given time.

After the Tables of the forbearance of Money, follow the Tables of the Discompt of Money; whereof there are Tables for 30. dayes, and for 12 moneths, as in the former. But here the Interest that is accounted for any Principall, is to be taken from the Principall, because the Money is payd so long before it is due. And this kind of Interest is called here, Discompt of Money: which is called by some, Rebatement; by others, Interest damageable; because there is ever payd lesse then the Principall.

The vse of the Tables of forbearance of Interest Money.

QUESTION I.

If 1753 li. be lent for 16. dayes, I desire to know what the Interest will come too, at the end of that time, at the rate of 8, per Cent. per Annum.

In this, and so in every Question that is to be answered by these Tables, you are to take the summe of the Principall into his parts, (or at the least suppose it so to be taken) as you see in the Margent: This done, you are to seeke in the Tables of forbearance of money, for 16. dayes, and in the Columnne (whose Title is Principall) looke first for 1000 li. which is the uppermost number; and carrying your eye along in right line, untill you come vnder the Title 16. dayes, you shall haue 3 li. 7 s. 7 d. 040 (which is the interest of 1000 li.) this place against the 1000. as you see in the Margent. Then next look for 700 li. in the

	li.	s.	d.
1000	3	7	7 040
700	2	7	3 718
50		3	4 552
3		2	433
1753	5	18	5 753

said

The Scale of Interest.

3

said Columnne, vnder the Title *Principall*, and carrying your eye along vntill you come vnder 16. dayes, you shall find 2 li. 7 s. 3 d. 728, which place vnder the former summe: then looke for the interest of 50 li. which in the same Columnne, vnder 16. dayes, is 3 s. 4 d. 552: and last of all, seeke for 3 li. in the first Columnne; and against it, in the Columnne vnder 16. dayes, you shall haue 1 d. 433: and placing all the seuerall summes of interest one vnder the other, and adding them altogether, it will be 5 li. 18 s. 5 d. and 753. parts of a penny, diuided into 1000. parts, and therefore equal to three farthings, (for if 1000. be a penny, then 250. shall be a farthing, and 500. shall be a halfe-penny, and 750. shall be three farthings,) So then, if 1753 li. be forborne for 16. dayes, the interest for that time is 5 li. 18 s. 5 d. 3 q. which was desired. Or wee might write

downe the Principall, and draw a line vnder it, as you see in this second example; and then seeke; first, for the interest of 1000 li. (as you were shewed before) and then the interest of 700 li. and so the interest of 50 li. and then of 3 li. and writing them downe vnder the line, adde them all together, and it will be 5 li. 18 s. 5 d. 753. (as before.)

Or you may adde the Interest and Principall together, and then you shall haue the summe that is to be payd, at the end of 16. dayes, namely, 1758 li. 18 s. 5 d. 753. as in the example appeareth,

li.
1753
3 7 7 040
2 7 3 728
3 4 552
2 433
5 18 5 753
1758 18 5 753

QUESTION. 2.

If 897 li. 17 s. 4 d. be put forth at interest, at the rate of 8. per Cent. per Annum, for 6. moneths, I desire to know what the interest will come too, at the end of that time?

- As in the former Question, set downe your Principall, with a line drawne vnder it, as you see here in the Margent: then seeke in the Table of the forbearance of money, for that Columnne that hath 6. moneths ouer it and in the Columnne towards the left hand, seeke first for 800 li. and carrying your eye in that line vntill you come vnder 6. moneth, you shall find the interest to be 31 li 7 s. 8 d. 253.

897 17 4
31 7 8 253
3 10 7 378
5 5 987
4 708
3 295
157
35 4 3 708
933 1 9 708

B 2

This

This set downe vnder the line, and then come to the 90 li. which is the next figure of the Principall, and so likewise 7 li. seeking their interest as you did the 800 li. and as was shewed in the first question, writing their severall interests vnder the line: that done, come to the 17 s. which in one summe you cannot find, but taking it into his parts, you may find in the said Columnne towards the left hand, therefore take out the interest of 10 s. which is 4 d. 708. and the interest of 7 s. is 3 d. 295. These write downe vnder the former summes; and then come to the 4 d. which yet remaines of the Principall, and for that, you haue at the foot of the Table one penny. If therefore you multiply the interest of a penny for 6. moneths, which is 639, 24 by 4 d: the product will be 156,96. From this cut off two figures, and because the figures cut off are neere an vnite, I therefore make the figures which remaine, and are but 156, to be 157, and so write them vnder the former summes, and then drawing another line under them, adde them all together, and it will be 35 li. 4 s. 3 d. 708. and so much comes the interest of 897 li. 17 s. 4 d. if it be forborne for 6. moneths. Or if you adde interest and Principall together, the summe to be payd at the end of 6. moneths will be 933 li. 18. 9 d. 708, as by the Worke appeareth.

QUESTION 3.

What will 948 li. 16 s. being forborne for 7. moneths and 12. dayes amount vnto, accompting interest at the rate of 8. per Cent. per Annum?

For answere of this Question (or any of like kind) seeke in the Tables of forbearance for 7. moneths or 12. dayes, it matters not which we take first: But here I will take 7. moneths. First write downe therefore your Principall, with a line vnder it; then seeke what the interest of this Principall will be in 7. moneths by the former rules, and placing the severall summes of the interest one vnder another (as in the former examples, and as here you see in the Margent) adde them all together, interest and Principall, and it will be 992 li. 7 s. 3 d. 834. as you see at E. which is a second Principall, with which you are to enter the Table for the 12. dayes that

li.	s.		
948	16		
48	6	6	056
1	16	8	802
	7	4	160
		5	510
		3	306

2	05	7	221
	4	6	722
		1	316
			212
			7
			3
994	17	7	215
46	1	7	215

yet

yet remaine: and vnder that Title 12. *dayes*, seeke the interest of 992 li. 7 s. 3 d. 834. and taking out the interest severally, as you did for the former time, and write them downe in order vnder your second Principall, adding them all together, you shall haue 994 li. 17 s. 7 d. 215. Onely here may be noted, that whereas in the former Questions the Principall consisted of Pounds, Shillings, and Pence, besides which, here in this Principall at E is 834. which is but part of a Penny: to find the interest whereof, multiply the said part of a Penny by the interest of a Penny for that time, and cut off five figures; that which remaines, is the interest of the said part of a Penny: as in this example, multiply 834, the part of a Penny, by 002, 53, the interest of a Penny for 12. *dayes* and the product is 211012. From which, cut off five figures, and place the 2. vnder your former summes of interest, and adding them all together, you shall haue 995 li. 2 s. 7 d. 215: as before. Now if the Question had beene to find onely the interest for that time, the Worke had beene the same, saue that when the Worke is done, you must take the Principall from the whole summe; and there will remaine 46 li. 1 s. 7 d. q. which is the interest for the time: as by the Worke appeareth.

The vse of the Tables of Interest
upon Discompt.

QUESTION 4.

There is a Debt of 473 li. 8 s. 6 d. to be payd at the end of nine moneths, the Creditor desires to haue his moncy payd in presently, and is content to discompt with the Debtor for the interest thereof at the rate of 8. *per Cent. per Annum*. The Question is, what summe of mony the Creditor is to receiue?

Here, as in the former Questions of forbearance, I set downe the Principall, with a line drawne vnder it, and seeking in the Tables of the discompt of moneyes for moneth, I find the Columnes ouer whose head is written 9. moneths: which done, I seeke first the discompt of 400 li. by seeking the 400 in the Columne to the left hand, and so in the same right line, vnder 9. moneths, I find the discompt thereof to be 32 li. 8 s. 8 d. 307.

li. s. d.			
473	8	6	
32	8	8	307
3	18	6	253
	3	4	382
		5	384
			336
26	11	0	662
446	17	5	338

B 3

This

The Scale of Interest.

This I place vnder the line, and seeke in like manner for the discount of 70 li. which will be 3 li. 18 s. 6 d. 253. and the discount of 3 li. will be 3 s. 4 d. 382. the discount of 8 s. will be 5 d. 384. and last of all, the discount of 6 d. will be 336. if wee multiply the said 6 d. by 056,09, which is the discount of a Penny (as was shewed in the forbearance of money.) All which summes placed downe in order (as you see in the example in the Margent) and added together, will be 26 li. 11 s. 0 d. 663. which taken from the Principall, there will remaine 446 li. 17 s. 5 d. 338. Therefore he that will receiue such a debt 9 moneths before it be due, shall receiue but 446 li. 17 s. 5 d. 338. For this summe forborne for 9. moneths, will make with the interest thereof the foresaid summe of 473 li. 8 s. 6 d.

QUESTION 5.

There is 1499 li. 16 s. 4 d. due to be payd at the end of six moneths and 24. dayes, the Creditor is desirous to haue his money payd in presently, and to discount the interest thereof for the time, after the rate of 8. per Cent. per Annum. The Question is, what summe of money is to be payd?

First set downe the principall Debt, namely, 1499 li. 16 s. 4 d. and draw a line vnder it: that done, finde in the Table of Discount the Columnne that answers to 6. moneths or 24. dayes (it matters not which we take first.) But here, in resolving this Question, I begin with 6. moneths, which being found, I seeke in the Columnne for 1000: which is the first number in that Columnne: and against it, vnder the title 6. moneths is 37 li. 14 s. 11 d. 891. which I write downe vnder the line. Of 400 li. is 15 li. 1 s. 11 d. 957. of 90 li. is 3 li. 7 s. 11 d. 390. of 9 li. is 6 s. 9 d. 539. Then for the discount of 10 s. I finde 4 d. 529. for 6 s. 2 d. 718. and for 4 d. Discount is onely 151 parts of a Penny. All which summes

set downe in order vnder the Principall, and added together, will be 58 li. 12 s. 4 d. 176. (as you see in the example at A) and so much is to be discompted for 6. moneths. If therefore wee take the discompt of 6. moneths at A, from the Principall, wee shall haue 1443 li. 3 s. 11 d. 824. as at B, which is a second Principall, for which I am to seeke the discompt for 24. dayes, as I did before for 6. moneths; taking our first the discompt for 1000 li. then for 400 li. and for 40 li. and 3 li. and so of the rest, proceeding in all points as you did in the first part of the Question: And writing downe all the seuerall summes so found vnder the second Principall at B, adde them all together, and their summe will be 7 li. 5 s. 8 d. 347. as at C, which summe taken from the second Principall at B, there will remaine 1435 li. 18 s. 3 d. 477. which is the answer to the Question.

*Of the Breviats of Interest.*

HAving shewed the use of the Tables of the forbearance, and discount of money, for time lesse then a yeare; I come to shew the use of the Breviats, that are for time, greater then a yeare. And these Breviats are in number five: that is, the forbearance, and discount of money. The forbearance discount, and purchase of annuities, rents, or pensions: The three latter whereof are againe subdivided euery one into three Breviats: that is, for yearely, halfe yearely, and quarterly payments, And in euery one of these Breviats, the first, third, and fifth columns, are yeares (which in the Annuall Breviats are continued to 100. yeares, and in the halfe yearely, and quarterly Breviats, unto 50. yeares,) the second, fourth, and sixth columns, are proportionall numbers, according to the rate of interest, which in these Breviats, is as 100. to 108. And these shew, what one pound forborne or discounted for, any number of yeares (not exceeding 100. yeares) will amount unto, by cutting off 8. figures towards the right hand, and reducing them into the parts of a pound of our English money: or what ten pounds will amount unto, by cutting off 7. figures or what 100. li. by cutting off 6. figures, And the like is to be understood for Annuities, as wee shall see hereafter. But before I come unto the Questions which shew the use of these Breviats, it will bee needfull that I shew you how to reduce the fractions of our English money, into a decimall fraction and the contrary: that is, to reduce a decimall fraction, into shillings and pence: Because of one, of both of these, there will bee use in every question following and this shall bee done in two Problemes, whereto I will referre you in every question.

The

The first Probleme.

Any fraction being giuen, to reduce the same into a decimall fraction.

The Rule.

Vnto the numerator of the fraction giuen, adde ciphers as many as you will, and diuide by the denominator of the sayd giuing fraction, and the product shall bee a numerator whose denominator shall be 10, 100, 1000, or a unit, with as many ciphers as you will.

Example.

If 15 s. were to be reduced into a decimall fraction: wee see that 15 s. is but part of a pound, and in common fractions thus expressed $\frac{15}{20}$. If therefore we adde a cipher, or ciphers unto 15, and diuide it by 20, we shall haue 75, which is the numerator of a decimall fraction, whose denominator is 100, and thus expressed $\frac{75}{100}$. Again, if I were to reduce 15 s. 7 d. into a decimall fraction, first begin with the

7 d. which is part of a shilling and is thus expressed $\frac{7}{20}$. Adde therefore ciphers vnto 7, as many as you will (as heere we will adde 7 ciphers and diuide by 12, and the product will be 5833333. which is the decimall of 7 d. before which, place 15 s. and it will bee 155833333. This diuide by 2, and the product will bee, 77916667, which is the numerator of the decimall fraction, whose denominator is 100000000. And this fraction, is equall unto $\frac{15}{20}$ and $\frac{7}{20}$ of a pound.

Sh.	Decimals.	d.	Decimals
19	950000 00	11	045833 33
18	900000 00	10	041666 67
17	850000 00	9	037500 00
16	800000 00	8	03333333
15	750000 00	7	029166 67
14	700000 00	6	025000 00
13	650000 00	5	020833 33
12	600000 00	4	016666 67
11	550000 00	3	012500 00
10	500000 00	2	008333 33
9	450000 00	1	004166 67
8	400000 00		
7	350000 00	9	
6	300000 00	3	003124 24
5	250000 00	2	002082 82
4	200000 00	1	001041 41
3	150000 00		
2	100000 00		
1	050000 00		

We may also take the decimal of any fraction of shillings, pence, or farthings out of this little Table. As if I would have the decimal of 15 s. 7 d. take first the decimal of 15 li. which is 75000000, then take the decimal of 7 d. which is 02916667 these two numbers added together, will be 77916667. as before.

The second Probleme.

Any decimal fraction being given, to reduce the same into the parts of a pound sterling money.

The Rule.

Multiply the numerator of the fraction given, first by 20 the number of Shillings in a pound, and the result will be shillings: again multiply the remainder by 12, the number of pence in a shilling, and the result will be pence: again multiply the remainder by 4, the number of farthings in a penny, and the result will be farthings,

Example.

If we shall take the decimal fraction made in the last Probleme of 15 s. 7 d. which was 77916667: we must note, that there is 8 figures in it: multiply it therefore by 20. and cut off 8. figures, and there will remain towards the left hand 15 s. Again multiply the figures that remain towards the right hand, namely 58333340. by 12, and cut off 8 figures and there will remain towards the left hand 7 d. as you see in the worke. Again, if 87362593 be a decimal fraction to be reduced instead of multiplying by 20, we may double the number, and cut off one place lesse (as we see in this example) the number at A being double, produceth B, 7 figures cut off, there remains 17 s. Again the number at B being doubled and slipped one place towards the right hand produceth the number C, add B and C together and it will be D, from which cut off 7 figures, and there remains

$$\begin{array}{r}
 87362593 \text{ — A} \\
 17 \overline{) 4725186} \text{ — B} \\
 \underline{9450372} \text{ C} \\
 51670333 \text{ D}
 \end{array}$$

maynes towards the left hand 5 d. (as you see by the worke) and that which remaines is somewhat more then a halfe-penny.

Againe, these fractions may be reduced by the decimall Table. Example, let the decimall fraction be 87362593, as before, seeke therefore in the decimall Table for the number that comes nearest unto it, but lesse, which heere is

8500000, against it is 17 s, take therefore the number against 17 s. from the giuen number, and their will remaine 02362593, which againe sought in the decimall Table, the nearest lesse is 02083333, and against it is 5 d. I take this number from the former remainder, and there will remaine .00279260, which is something more then a halfe-penny, as you may see by the worke.

$$\begin{array}{r} 87362593 \\ 85000000 \quad 17 \text{ s.} \\ \hline 02362593 \\ 02083333 \quad 5 \text{ d.} \\ \hline 00279260 \end{array}$$

The use of the first Breviat, which is for the
forbearance of money.

QUESTION 6.

If 100 li. be put forth at Interest, what will it amount unto, if it be forborne for 5. yeares, and a quarter, at the rate of 8. per Cens. per Annum?

Seeing the time in this question for which 100 li. is forborne is 5 yeares and a quarter, therefore seeke in the first Breviat for for the number that answers unto 5 yeares, and a quarter, which is, 149787205, and because the money in the question is 100 li. which multiplies not but by adding of ciphers, I therefore adde 2. ciphers and cut off 8 figures, and there remaines toward the left hand 149 li. and the 8 figures cut off being reduced into shilling and pence by the 2. Probleme will be 15 s. 8 d. Therefore if 100 li. bee forborne for 5 yeares and a quarter, it will amount 149 li. 15 s. 8 d, as by the worke appears.

$$\begin{array}{r} 14978720500 \\ 1574410 \\ \hline 14882 \\ \hline 819292 \end{array}$$

Question

The Scale of Interest.

QUESTION 7.

If 153 li. 17 s. 7 d. be forborne for 12. yeares, and a halfe, what will it amount unto, at the end of that time, accompting interest at the rate of 8. *per Cent. per Annum.*

Because the summe of money, named in the Question, is 153 li. 17 s. 7 d. we are first to reduce the 17 s. 7 d. into a decimall fraction, by the 1. problem before going, and it will be 87916667. but we may cast away foure of the figures toward the right hand, and reserve onely 8792. which must bee placed after the integrall parts of pounds, as if they were all one summe, onely wee will draw a line under the foure last figures, to shew that they are but a fraction: thus 1538792. Then seeke in the first Breviat, for the number that answeres unto 12 yeares, and a halfe, which is 261695915. and this multiplied by 1538792. the product will bee 40269558043.

$$\begin{array}{r}
 261695915 \\
 198792 \\
 \hline
 523391830 \\
 2355263235 \\
 1831871405 \\
 2093567140 \\
 785087745 \\
 1308479575 \\
 261695915 \\
 \hline
 40269558043 \\
 13 \overline{) 9116086} \\
 \underline{18232172} \\
 109393032
 \end{array}$$

(the figures of the fraction being neglected) from which cut off 8. figures towards the right hand and there will remayne 402 li. and the figures cut off being reduced into the parts of a pound by the 2. Probleme, will be 13 s. 10 d. Therefore the answer to the question is 402 li. 13 s. 10 d. And vnto so much will 153 li. 17 s. 7 d. amount. If it be forborne 12 yeares and a halfe, as by the worke appeareth.

QUESTION 8.

If 475 li. be forborne for 4. yeares, three quarters, and 19. dayes, what shall be payd at the end of the terme, interest and principall, allowing interest, at the rate of 8. *per Cent. per Annum?*

Seeke in the first Breviat for the number that answeres unto 4. yeares, three quarters, which is 144132805. This multiplied by 475, (the summe of money named in the Question) the product will

The Scale of Interest.

will be 68463082375. From which cut off 8. figures towards the right hand, and there will remaine 684 li. and the figures cut off being reduced into the parts of our English money, will be 12 s. 7 d. Therefore if 475 li. be let out for 4. yeares and 3. quarters, it will amount unto 684 li. 12 s. 7 d. 397. which is the first Worke. Then for the 19. dayes, wee must see by the Table of forbearance for Dayes what this 684 li. 12 s. 7 d. 397. will amount unto in that time, which may be done by the first Question, and the interest added to this Principall 684 li. 12 s. 7 d. 397. the answer will be 687 li. 7 s. 6 d. as by the Worke appeareth.

The Worke

for 4. yeares 3. quarters.

facit.

The use of the second Breviat, which is for the
discompt of money.

QUESTION 9.

If 349 li. be due to be payd as the end of 7. yeares, and a quarter, what summe of money will pay it presently, discounting interest at the rate of 8. per Cent. per Annum?

Because the time in the Question is 7 yeares, and a quarter, therefore finde the number which in the second Breviat answers thereto,

The Scale of Interest.

thereto, which is 57237120. This number multiplied by 349 li. (the summe of money named in the Question) the product will be 19975754880. From which cut off 8. figures, beginning at the right hand, and there will remaine 199 li. towards the left hand, and the figures cut off being reduced by the second Probleme, will be 15 s. 1 d. Therefore 199 li. 15 s. 1 d. will pay 349 li. if it bee paid 7. yeares and a quarter before it be due, the interest being discompted. For this summe 199 li. 15 s. 1 d. 813. or 1997575. if it be forborne at the same rate, for the like time, will amount unto 349 li. which is the summe named in the Question.

$$\begin{array}{r}

 \hline
 \end{array}$$

QUESTION 10.

There is a Lease to be sold, which after 12. yeares will be worth 983 li. what is it worth readie money, discompting interest, after the rate of 8. per Cent. per Annum?

This Question is in effect the same with the former: for there the Question was, of a summe paid 7. yeares and a quarter before it was due: and here, of a Lease bought 12. yeares before any Profit be received. And seeing the Lease is worth 983 li. after 12. yeares, therefore this summe of money is paid 12. yeares before it be due. Therefore looke in the second Breviat for the number that answers unto 12. yeares, which is 39711336. This number beeing multiplied by 983, (the summe named in the Question) and the product will be 39036243288. From which cut off 8. figures, and there will remaine 390 li. towards the left hand, and the figures cut off being reduced by the second Probleme, will be 7 s. 2 d. (almost 7 s. 3 d.) Therefore the answer to the Question is 390 li. 7 s. 2 d. And so much is the Lease worth, to be paid presently downe.

$$\begin{array}{r}
 39711376 \\
 \times 983 \\

 \end{array}$$

QUESTION

QUESTION II.

If 578 li. be due at the end of 2. yeares, 3. quarters, and 9. dayes, what is it worth ready money, discounting interest at the rate of 8. per Cent. per Annum?

First seeke in the second Breviat for the number that answers unto 2. yeares and 3. quarters, which is 80924366. This multiplied by 578 li. the product will be 46774283548. From which cut off 8. figures, and there remains 467 li. and the figures cut off, being reduced by the second Probleme, will be 14 s. 10 d. 280. Therefore, the summe at the end of 2. yeares, 3. quarters, is 467 li. 14 s. 10 d. 280. And this againe being discounted for 9. dayes (as was shewed before, Question the fifth) the discount will be 16 s. 10 d. 825. which taken from 467 li. 14 s. 10 d. 280. there will remaine 466 li. 17 s. 11 d. Therefore if 578. be due at the end of 2. yeares, 3. quarters, and 9. dayes, it will bee payd with 466 li. 17 s. 11 d. ready money, as by the Worke appeareth.

The use of the third Breviar, which is of the
forbearance of Annuities, Rents, or
Pensions, payd yearly.

QUESTION 12.

If 34 li. Rent, Annuitie, or Pension be forborne 9. yeares,
what will it amount unto at the end thereof, reckoning
interest at the rate of 8. per Cent. per Annum?

For answer of this Question, seeke in the third Breviar, which is
of the forbearance of Annuities: And because the time in the
Question is 9. yeares, therefore take
the number that answeres vnto 9.
yeares, which is 1248755784. This
number multiplie by 34 li. (the Rent
named in the Question) and the
product will be 42457696656. From
which cut off 8. figures, and there
will remaine towards the left hand
424. and the figures cut off, being
reduced by the second Probleme,
will bee 11 s. 6 d. So that the
answere to the Question is 424 li. 11 s. 6 d. as by the Worke
appeareth.

$$\begin{array}{r}
 1248755784 \\
 \times 34 \\
 \hline

 115393312 \\
 110786624 \\
 \hline
 614719744
 \end{array}$$

QUESTION 13.

A. owes unto B. 748 li. to be payd in 12. yeares, that is, at
the end of each yeare 62 li. 6 s. 8 d. they both agreed
to respite these payments untill the last be due, that is,
untill the end of 12. yeares, and then to pay the whole
748 li. with the interest thereof, at the rate of 8. per
Cent. per Annum: It is therefore demanded, what summe
A. shall pay unto B?

Because the time in this Question is 12. yeares, therefore looke
in the third Breviar for the number which answeres unto 12. yeares,
which

which is 1897711646. This I multiplie by 62 li. 6 s. 8 d. (the odde money being first reduced into a Decimall fraction by the first Probleme, which will bee 623333) and the product will bee 118290691677. From this cut off 8. figures, and by the second Probleme reduce the figures cut off towards the right hand, and wee shall haue 1182 li. 18 s. 1 d. as by the Worke appeareth.

$$\begin{array}{r}
 1897711646 \\
 \underline{623333} \\
 5693137938 \\
 5693137938 \\
 5693137938 \\
 5693137938 \\

 \end{array}$$

QUESTION

QUESTION 15.

A. owes unto B. 725 li. to be payd at the end of 7. yeares and a halfe: Now all the estate that A. hath to pay this Debt, is but an Annuitie of 80 li. *per Annum*, payd halfe yearely by 40 li. at the end of every halfe yeare, and to continue 7. yeares: And this Annuitie hee is desirous to make over unto B. for to give him satisfaction for his Debt; which B. accepts. The Question is, what this Annuitie will amount unto, at the end of the time, allowing interest at the rate of 3. *per Cent. per Annum*?

The end of this Question, is but to see whether this Annuitie for 7. yeares will countervail the Debt named in the Question, that so it may appeare whether there be gaine or losse, and on which side the gaine or losse falls.

Looke therefore in the fourth Breviat, for the number that answeres unto 7. yeares, which is 1819565262, and multiplie it by 40. (the halfe yearely payment) and the product will bee 72782610480. From which cut off 8. figures, and there will remaine towards the left hand 727 li. and the figures cut off being reduced by the second Probleme, will bee 16 s. 6 d. Therefore this Annuitie for 7. yeares, will amount unto 727 li. 16 s. 6 d. By which it appeares, that B. shall have in his money, and also gaine 2 li. 16 s. 6 d. by the Bargaine.

1819565262

$$\begin{array}{r} 40 \\ 727 \overline{) 82610480} \end{array}$$

The

The use of the fifth Breviat, which is of the
forbearance of Annuities, Rents, or
Pensions, payd quarterly.

QUESTION 16.

There is a debt of 645 li. to be payd by 43 equal payments that is 15 li. at the end of every three moneths (or quarter of a yeare) and the parties agree to respice all these payments untill the last be due, which will be at the end of 10 yeares and three quarters: the question is, unto how much it will amount, with interest allowed, at the rate of 8. per Cent. per Annum?

I seeke in the fifth Breviat for the number which answers unto 10 yeares 3 quarters, which is 6616017878, this multiplyed by 15 li. (the quarterly payment named in the question) the product will be 99390268170, from which cut of 8. figures towards the left hand, and there will remaine towards the right hand 993 li. and the figures cut off being reduced by the 2. Probleme will be 18 s. Therefore, if these payments be all respiced untill the last be due, they will amount unto with interest, the summe of 993 li. 18 s. as by the Worke appeareth.

$$\begin{array}{r} 6616017878 \text{ (15)} \\ \underline{33130089390} \\ 993190268170 \\ 18 \overline{) 053634} \\ \underline{107268} \\ 01643608 \end{array}$$

QUESTION 17.

There are two men in suite for an estate of land, whose yeerely rent is 72 li. payd quarterly by 18 li. per quarter, during the time of their suite, it is ordered that the Tenant shall pay no rent to cyther party untill the suit be ended, and then to pay it altogether, and to allow interest, after the rate of 8 per Cent. per Annum? now the suite being ended, the Tenant is found in a rerage with his rent for 9 yeares and a quarter: the question is, what summe of money is to be payd.

Because the question here is, what 72 li. per Annum payd
F quar-

quarterly by 18 li. per quarter, for 9 yeares, and a quarter will amount unto, therefore seeke in the Breviat the number that answers unto 9 yeares and a quarter, which is 5342371905. This number multiplied by 18 li. (the quarterly rent) and the product will bee 96162694290. From which cut off 8 figures, and there will remaine towards the left hand 961 li. and the figures cut off being reduced by the 1 Probleme, will be 12 s. 6 d. Therefore the answer to the question is, 961 li. 12 s. 6 d. and so much is the tenant to pay for rent, and interest, as by the worke appeareth.

$$\begin{array}{r}
 5342371905 \quad (18 \\
 42718975240 \\
 \hline
 96162694290 \\
 18 \overline{) 538858} \\
 \underline{1077716} \\
 61466296
 \end{array}$$

*The use of the sixt Breviat, which is for the
discompt of Annuities, Rents, or Pen-
sions, payd yearly.*

QUESTION 18.

What is 57 li. Annuitie, Rent, or Pension, to indure 31 yeares worth ready money, reckoning interest at the rate of 8. per Cent. per Annum?

This question may be answered, by taking the number (in the sixt Breviat) which answers unto 31 yeares, which is 1134979939. This number multiply by 57 li. (the Annuity named in the question) and the product will be 64693856523. From this product cut off 8 figures, and there will remaine towards the left hand 646 li. and the figures cut off being reduced by the 1 Probleme, will be 18 s. 9 d. Therefore if 57 li. Annuitie, Rent, or Pension be to be sold for 31 yeares, it is worth 646 li. 18 s. 9 d. as by the worke appeareth.

$$\begin{array}{r}
 1134979939 \\
 57 \\
 \hline
 7944859573 \\
 5674899695 \\

 64693856523 \\
 18 \overline{) 7713046} \\
 \underline{15426092} \\
 912556552
 \end{array}$$

QUESTION 19.

There is a Lease of certaine Lands worth 32 li. per Annum, more then the rent payd to the Lord for it, of which Land there is a Lease yet in being for 7. yeares, and the Lessee is desirous to take a Lease in reversion for 11 yeares, to begin when his old Lease is expired; the question is, what sum of money is to be payd for this Lease, in reversion, allowing interest, at the rate of 8 per Cent. per Annum?

There are two wayes to resolve this question, for First, we may see what 32 li. rent is worth ready money for 11 yeares, as if it were to begin presently, and (working as was shewed in the last question) the answer will be 320 li. 10 s. 9 d. And because this summe of money is payd 7 yeares before the Lease doth begin, therefore discount the 320 li. 10 s. 9 d. for 7 yeares (as is shewed in the 9, 10, and 11 questions) and the answer will be 187 li. 0 s. 7 d.

Secondly, we may worke it by this sixt Breviat only, for if we first see what this rent of 32 li. is worth for 7 yeares by taking the number, which in the sixt Breviat answers unto 7 yeares, which is 520637006, and multiplying it by 32 li. (the rent named in the question) the product will be 16660384192 as you see in the first Example. Secondly adde 7 yeares to 21 yeares, and it makes 28 yeares: then seeke the number that answers to 28 yeares which is 1105107849. This multiplyed by 32 li. the product will be 35363451168, as you see in the second example. Then take the first product from the second, and there will remaine 18703066976. From which cut off 8. figures, and there will remaine 187 li. and the figures cut off being reduced by the 2 Probleme will be onely 7 d. So that the answer to the question is, 187 li. 0 s. 7 d. as by the Worke appeareth.

The worke for 7 yeares

F 2

The

QUESTION 15.

A. owes unto B. 735 li. to be payd at the end of 7. yeares and a halfe: Now all the estate that A. hath to pay this Debt, is but an Annuitie of 80 li. *per Annum*, payd halfe yearly by 40 li. at the end of every halfe yeare, and to continue 7. yeares: And this Annuitie hee is desirous to make over unto B. for to give him satisfaction for his Debt; which B. accepts. The Question is, what this Annuitie will amount unto, at the end of the time, allowing interest at the rate of 8. *per Cent. per Annum*?

The end of this Question, is but to see whether this Annuitie for 7. yeares will countervail the Debt named in the Question, that so it may appeare whether there be gaine or losse, and on which side the gaine or losse falls.

Looke therefore in the fourth Breviat, for the number that answers unto 7. yeares, which is 1819565262, and multiplie it by 40. (the halfe yearly payment) and the product will bee 72782610480. From which cut off 8. figures, and there will remaine towards the left hand 727 li. and the figures cut off being reduced by the second Probleme, will bee 16 s. 6 d. Therefore this Annuitie for 7. yeares, will amount unto 727 li. 16 s. 6 d. By which it appeares, that B. shall have in his money, and also gaine 2 li. 16 s. 6 d. by the Bargaine.

$$\begin{array}{r}

 \underline{1044192} \\
 6 \overline{) 265152}
 \end{array}$$

The

The use of the fifth Breviat, which is of the
forbearance of Annuities, Rents, or
Pensions, paid quarterly.

QUESTION 16.

There is a debt of 645 li. to be paid by 43 equal payments
that is 15 li. at the end of every three months (or quar-
ter of a yeare) and the parties agree to respice all these
payments untill the last be due, which will be at the end
of 10 yeares and three quarters: the question is, unto
how much it will amount, with interest allowed, at the
rate of 8, per Cent. per Annum?

I seeke in the fifth Breviat for the number which answers unto
10 yeares 3 quarters, which is 6616017878,
this multiplied by 15 li. (the quarterly pay-
ment named in the question) the product
will be 99390168170, from which cut of 8.
figures towards the left hand, and there will
remain towards the right hand 993 li. and
the figures cut off being reduced by the 1.
Probleme will be 18 s. Therefore, if these
payments be all respiced untill the last be due, they will amount unto
with interest, the summe of 993 li. 18 s. as by the Worke appa-
reth.

$$\begin{array}{r} 6616017878 \text{ (15)} \\ 33130089390 \\ \hline 993190168170 \\ 18 \overline{) 993634} \\ \underline{107268} \\ 0643608 \end{array}$$

QUESTION 17.

There are two men in suite for an estate of land, whose yeerly
rent is 72 li. paid quarterly by 18 li. per quarter, during the
time of their suite, it is ordered that the Tenant shall pay
no rent to cyther party untill the suite be ended, and then
to pay it altogether, and to allow interest, after the rate of
8 per Cent. per Annum? now the suite being ended, the Te-
nant is found in a retrage with his rent for 9 yeares and a
quarter: the question is, what summe of money is to be paid.

Because the question here is, what 72 li. per Annum paid quar-

quarterly by 18 li. per quarter, for 9 years, and a quarter will amount unto, therefore seek in the Breviat the number that answers unto 9 years and a quarter, which is 5342371905. This number multiplied by 18 li. (the quarterly rent) and the product will be 96162694290. From which cut off 8 figures, and there will remain towards the left hand 961 li. and the figures cut off being reduced by the 3 Probleme, will be 12 s. 6 d. Therefore the answer to the question is, 961 L. 12 s. 6 d. and so much is the tenant to pay for rent, and interest, as by the worke appeareth.

5342371905 (18

1077716

61466296

The use of the sixt Breviat, which is for the
discompt of Annuities, Rents, or Pen-
sions, payd yearly.

QUESTION 18.

What is 57 li. Annuity, Rent, or Pension, to indure 31 years worth ready money, reckoning interest at the rate of 8. per Cent. per Annum?

This question may be answered, by taking the number (in the sixt Breviat) which answers unto 31 years, which is 1134979939. This number multiply by 57 li. (the Annuity named in the question) and the product will be 64693856523. From this product cut off 8 figures, and there will remain towards the left hand 646 li. and the figures cut off being reduced by the 3 Probleme, will be 18 s. 9 d. Therefore if 57 li. Annuity, Rent, or Pension be to be sold for 31 years, it is worth 646 li. 18 s. 9 d. as by the worke appeareth.

Question

QUESTION 19.

There is a Lease of certaine Lands worth 32 li. per Annum, more then the rent payd to the Lord for it, of which Land there is a Lease yet in being for 7. yeares, and the Lessee is desirous to take a Lease in reversion for 11 yeates, to beginne when his old Lease is expired; the question is, what sum of money is to be payd for this Lease, in reversion, allowing interest, at the rate of 8 per Cent. per Annum?

There are two wayes to resolve this question, for First we may see what 32 li. rent is worth ready money for 11 yeares, as if it were to begin presently, and (working as was shewed in the last question) the answer will be 320 li. 10 s. 9 d. And because this summe of money is payd 7 yeares before the Lease doth begin, therefore discount the 320 li. 10 s. 9 d. for 7 yeares (as is shewed in the 9, 10, and 11 questions) and the answer will be 187 li. 0 s. 7 d.

Secondly, we may worke it by this sixt Breviat only, for if we first see what this rent of 32 li. is worth for 7 yeares by taking the number, which in the sixt Breviat answers unto 7 yeares, which is 520637006, and multiplying it by 32 li. (the rent named in the question) the product will be 16660384192 as you see in the first Example. Secondly adde 7 yeares to 21 yeares, and it makes 28 yeares: then seeke the number that answers to 28 yeares which is 1105107849. This multiplyed by 32 li. the product will be 35363451168, as you see in the second example. Then take the first product from the second, and there will remaine 18703066976. From which cut off 8. figures, and there will remaine 187 li. and the figures cut off being reduced by the 2 Problems will be onely 7 d. So that the answer to the question is, 187 li. 0 s. 7 d. as by the Worke appeareth.

The worke for 7 yeares

The worke for 28 yeares

$$\begin{array}{r}
 520637006 \\
 \times 32 \\
 \hline
 1041274012 \\
 1561911013 \\

 18703066976
 \end{array}$$

The use of the seventh Breviat, which is for the
discompt of Annuities, Rents, or Pen-
sions, payd halfe yearly.

QUESTION 20.

What is 16 li. 10 s. *per Annum*, payd halfe yearly by 8 li.
5 s. *per halfe yeare*, worth for 21 yeares and a halfe, recko-
ning interest at the rate of 8. *per Cent. per Annum*?

Because the question is of a rent payd halfe yearly, therefore
looke in the seventh Breviat, for the
number that answers unto 21 yeares
and a halfe, which is 2061772693
This number multiply by 8 li. 5 s. (the
5 s. first reduced into a decimall fracti-
on by the 1 Probleme) and the product
will be 17009824717. From which cut
off 8 figures, and there will remaine
towards the left hand 170 li. and the
figures cut off being reduced by the 2
Probleme, will be 1 s. 11 d. Therefore
a rent of 16 li. 10 s. *per Annum*, payd
halfe yearly, may be bought for 170 li. 1 s. 11 d. as by the worke
appeareth,

$$\begin{array}{r}
 2061772693 \\
 825 \\
 \hline
 10308863465 \\
 4123545386 \\

 19249434 \\
 18498868 \\
 \hline
 110993108
 \end{array}$$

QUESTION 21.

There is a Lease of a house for 27 yeares and a halfe, yet
to come, whereof the present rent is 16 li. *per Annum*,
payd by 13 li. at the end of every halfe yeare, for 7.
yeares and a halfe, but when the 7 yeares and a halfe
is expired, the rent will be 32 li. *per Annum*, payd by 16 li.
per halfe yeare, the Question is what this Lease is worth
readie money, accompting interest, after the rate of 8. *per*
Cent. per Annum?

For answer of this question, seeke first what 32 li. *per Annum*
payd halfe yearly will bee worth ready money, for the whole
time

time of 27 yeares and a halfe, as if the rent were so to continue all the time. Secondly, deduct 13 li. (the halfe yearly rent for 7. yeares and a halfe) from 16 li. (the rent payd for the remainder of the Lease named in the Question) and there will remaine 3 li. Seeke what this 3 li. per halfe yeare will amount unto for 7 yeares and a halfe, and deduct this from the former found summe, and the remainder shall be the answer to the question. For example seeke in the Breviate for halfe yearly payments, the number that answers to 27 yeares and a halfe, which is 2241978142, This multiplied by 16 li. (the halfe yearly payment of the greatest rent) and working (as in the last question before going and the facit will be 358 li. 14 s. 3 d.

Then take the number that answers unto 7 yeares and a halfe, which is 1117845243. this multiplied by 3 li. the difference of the halfe yearly rents, and working it likewise, the facit will be 33 li. 10 s. 8 d. This taken from the former summe, there remaines 325 li. 3 s. 7 d. which is the answer to the question, and the price of the Lease, as by the Worke appeareth.

The worke for 27½ yeares

The worke for 7½ yeares

$$\begin{array}{r}
 (16) \quad 2241978142 \\
 \underline{13451869452} \\
 35817861872 \\

 \end{array}$$

16 li. per halfe yeare for 27 yeares and a halfe is worth

358 14 3

3 li. per halfe yeare for 7 yeares and a halfe in worth

33 10 8

The present worth of the Lease is

325 3 7

The use of the eight Breviat, which is for the
discomps of Annuities, Rents, or Pen-
sions, payd quarterly.

QUESTION 22.

There is a Lease of certaine lands to be let for 20 yeares
and a quarter, for which there is a fine of 250 li . to bee
payd and 44 li . rent *per Annum* payd quarterly, but the
tenant is desirous to pay lesse rent, namely 20 li . *per*
Annum, and to giue a greater fine. The question is, what
fine ought to be payd, to bring downe the rent to 20 li .
according to interest at the rate of 8. *per Cent.* *per Annum*?

You see that the rent in this question is abated 24 li . *per Annum*
namely 6 li . euery quarter, therefore see what 6 li . *per* quarter, is
worth ready money, for 20 yeare and a quarter, by taking the
number which in the 8 Breviat answers to 20 yeares, and a quarter
which is 4064233863, and multiplying
it by 6 li . the quarterly rent to be abated
and the product will be 24385403178.
From this cut of 8 figures, and there
will remaine towards the left hand
243 li . and the 8 figures cut off being
reduced by the 2 Probleme, will bee
27 s. Therefore 6 li . *per* quarter, or 24 li .
per Annum, for 20 yeares and a quarter,
is worth ready money 243 li . 17 s. which added to the other fine,
namely 250 li . makes 493 li . 17 s. And so much fine is the Tenant
to pay: if he pay but 20 li . rent as by the worke may appeare.

$$\begin{array}{r} 4064233863 \\ \times 6 \\ \hline 24385403178 \\ 17 \overline{) 0806356} \\ \underline{01612713} \\ 09676272 \end{array}$$

Question

QUESTION 13.

A, hath a Lease of 320 li. per Annum, payd quarterly by 80 li. per quarter, for 17 yeares and a quarter. B, hath a Lease of 216 li. per Annum, payd quarterly by 54 li. per quarter for 31 yeares. These two are desirous to change their Leases each with other, and to giue the difference of price: the question is, which of these two Leases are the better, and what that difference is that the one is to pay unto the other, accounting interest at the rate of 8-per-Cent. per Annum?

First seeke (in the eight Breviat) for the number that answers unto 17 yeares and a quarter, which is 3781871918: this number multiply by 80 li. the quarterly payment of the Lease belonging to A. Then take the number that answers to 31 yeares, which is, 4673933847, this multiplyed by 54 the quarterly payment of the Lease belonging to B.) cut off 8 figures from each product, and reduce them by the 2 Probleme, into the parts of our English money, and subtract the lesser from the greater, and the difference shewes what the one is to pay unto the other.

The Worke.

A	B
3781871918	4673933847
80	54
3026 29753440	18695735388
5 950688	23369669235

11 408256	187855476
	9719952
	51265712

	li.	s.	d.	
The Lease A. is worth	3026	5	11	
The Lease B. is worth	2523	18	5	
The difference is	503	07	6	which B. is to pay unto A upon the exchange of the two Leases.

The use of the ninth Breviat, which is for the purchase of Annuities, Rents, or Pensions, paid yearly.

QUESTION 24.

What Annuity, Rent, or Pension will 245 li. ready money, buy for 27 yeares, accompting interest at the rate of 8. per Cent. per Annum?

Because the time in the question is 27 yeares, therefore seek in the ninth Breviat the number that answers thereto, which is 9144809. This number multiplied by 245 li. (the summe named in the question) and the product will bee 2240478205. From which cut off 8 figures, and there will remaine 22 li. and the figures cut off being reduced by the 2 Probleme, will be 8 s. 1 d. Therefore 245 li. will buy for 27 yeares an Annuity of 22 li. 8 s. 1 d. as by the worke.

$$\begin{array}{r}
 9144809 \\
 \times 245 \\
 \hline
 45724045 \\
 36579136 \\
 18189618 \\
 \hline
 2240478205 \\
 80956410 \\
 191282 \\
 \hline
 22147692
 \end{array}$$

QUESTION 25.

If the Lease of a house, or Lands be worth 153 li. fine, and 16 li. rent per Annum, for 31 yeares, and the Lessee be desirous to bring downe the fine to 80 li. and so to pay the more rent, the question is, what rent the Tenant shall pay accompting interest, at the rate of 8 per Cent. per Annum?

This Question differs not from the former if we doe but consider, that for as much as the fine is to be diminished, therefore the rent must be augmented. Take therefore the difference betweene the two fines named in the question, that is 153 li. and 80 li. by subtracting the one, out of the other, and there will remaine 73 li. The question then is, what yearly rent this 73 li. will buy for 31 yeares. Take the number which in the ninth Breviat answers un-

to 31 yeares, which is 8810739, and multiply it by 73 (the difference of the two fines) and the product will be 643183217. From which cut off 8 figures, and there will remaine 6 li. and the remainder of the figures reduced by the 3 Probleme, will bee 8 l. 7 d. So the rent that 73 li. will buy for 31 yeares is, 6 li. 8 l. 7 d. which is to bee added unto the the rent named in the question, which is 16 li. and it will be 22 li. 8 l. 7 d. and so much rent is to be payd, if the Tenant bring downe the fine unto 80 li.

$$\begin{array}{r}
 8810739 \\
 \times 73 \\
 \hline
 26432187 \\
 61679103 \\
 \hline
 643183217 \\
 8 \overline{) 6366434} \\
 \underline{12732868} \\
 7 \overline{) 6397208}
 \end{array}$$

The use of the tenth Breviat, which is for the purchase of Annuities, Rents, or Pensions payd halfe yearly.

QUESTION 36.

If a man give for the Lease of a House or Lands 124 li. fine, and 12 li. rent per Annum, payd halfe yearly, by 6 li. per halfe year, for 30 yeares and a halfe. I demand what halfe yearly rent is payd for the sayd House or Land, accompting interest at the rate of 8 per Cent. per Annum.

Because the fine named in the question is 124 li. therefore see what halfe yearly rent this 124 li. will buy for 30 yeares and a halfe by taking the number, which in the tenth Breviat answers unto 30 yeares and a halfe, which is 4337860, and multiplying it by 124 li. the product will be 537894640. From this number cut off 8. figures, and reduce them by the 3 Probleme, and the product will be 5 li. 7 s. 6 d. as by the worke appeareth. So that, besides the halfe yearly rent of 6 li. which was named in the question, he that gives 124 li. fine, gives also 5 li. 7 s. 6 d. rent every halfe year, (For so much will the fine buy for the time proposed)

$$\begin{array}{r}
 4337860 \\
 \times 124 \\
 \hline
 17351440 \\
 8675720 \\
 4337860 \\
 \hline
 537894640 \\
 7 \overline{) 578928} \\
 \underline{1157856} \\
 6 \overline{) 947136}
 \end{array}$$

posed, and this added to the rent, makes 11 li. 7 s. 6 d. and so much rent is payd euery halfe yeare, if the rent and fine be both considered.

QUESTION 27.

A. owes unto B, 879 li. and not hauing money to pay this debt, agrees with B. to take his money. at 12 fixe moneths, by equall payments, and is content to allow interest, at the rate of 8 per Cent. per Annum; the question is what that equall summe of money is, which is to be payd at the end of each fixe moneths?

For answere of this question, seeke in the tenth Breviat for the number that answers unto 6 yeares (for 12 fixe moneths is equall to 6 yeares) which is 10607696, this multiply by 879 (the debt named in the question) and the product will be 9324164784. From which cut off 8 figures, and there will remaine 93 li. and the 8 figures cut off, being reduced by the second Probleme, will be 4 s. 9 d. Therefore the answere to the question is 93 li. 4 s. 9 d. and so much is to be payd at the end of euery fixe moneths.

$$\begin{array}{r}
 10607696 \\
 \times 879 \\
 \hline
 95469264 \\
 74253872 \\
 84861568 \\
 \hline
 9324164784 \\
 \div 8329568 \\
 \hline
 116659136 \\
 \div 99954816
 \end{array}$$

The use of the eleaventh Breviat, which is for the purchase of Annuities, Rents, or Pensions, payd quarterly.

QUESTION 28.

There is a Lease for 36 yeares, which is offered to sale for 1350 li. but the buyer desires rather to pay a certaine rent quarterly, which shall countervaille the summe of money: the question is, what this quarterly rent shall be, to make the one bargaine as good as the other, accounting interest at the rate of 8. per Cent. per Annum?

Seeke in the eleaventh Breviat for the number which answers unto

36 yeares which is 2071440, this multiply by the summe of money named in the question that is, by 1350, and the product will be 2797794000, from which cut off 8 figures and there will remaine 27 li. towards the left hand, and the figures cut off being reduced by the 2. Probleme will be 19 s. 6 d. Therefore, 27 li. 19 s. 6 d. per quarter, for 36 yeares is worth 1350 li. as may appear.

QUESTION 19.

A Master leaveth off his trade unto his Servant, and delivereth unto him in wares 1527 li. together with the Lease of his house and shop, which is rated at 152 li. in all 1527 li. and because his Servant hath not present money to pay down, therefore the Master is content to take his money by 67 equall quarterly payments, (that is in 16 yeares and three quarters;) so his Servant will allow him interest, at the rate of 8 per Cent. per Annum, which he is content to doe. The question is, what this quarterly payment shall be.

Take the number which in the eleventh Breviat answers unto 16 yeares 3 quarters, which is 2681444, and multiply it by 1527 li. (the summe of money named in the question) the product will be 4094564988. From which cut off 8 figures, and there will remaine 40 li. and the figures cut off being reduced by the 2. Probleme will be 18 s. 10 d. as you see the worke in the Example. By which it appears that 1527 li. will be paid in 16 yeares 3 quarters, by 40 li. 18 s. 10 d. per quarter with interest allowed, at the rate of 8 per Cent. per Annum.

2681444

Question

QUESTION 30.

A. owes unto B. 650 li. to be payd at the end of 6 yeares:
And B. owes unto A. 381 li. to be payd in 9 yeares, that is,
at the end of every 3 yeares 127 li. but they are agreed
to cleare their debts presently, and to allow each other
interest at the rate of 8. per Cent. per Annum? The
Question is, which of them is to pay moneys unto the
other, and how much?

If we consider the Question, wee shall see that B. is to pay his
second payment of 127 li. unto A. at the same time that A. is to pay
unto B. his payment of 650 li. therefore we may save one worke in
the resolving of this question, by taking 127 li. the second payment
of B. unto A. at the end of 6 yeares, from
650 li. which A. is to pay unto B. at the
same time, and there will remaine 523 li.
therefore according to the ninth questi-
on, 523 li. payd 6 yeares before it be due
will be payd with 329 li. 11 s. 6 d. Then
see by the same ninth question, what
summe will pay 127 li. 3 yeares before it
be due, which will be payd with 100 li.
16 s. 4 d. then see what summe will pay
127 li. 9 yeares before it be due, which
will be payd with 63 li. 10 s. 7 d. which added to the former, will be
164 li. 6 s. 11 d. this summe taken from 329 li. 11 s. 6 d. there will
remain 165 li. 6 s. 7 d. which B. is to pay unto A. as by the worke
appareth.

Question

QUESTION 31.

A. lent unto B. 475 li. upon a mortgage of Land, who's rent is 38 li. per annum, payd halfe yearly, by 19 li. per halfe yeare: on this condition, that they shall bee accomprable each to other, for the interest thereof, at the rate of 8. per Cent. per annum? B keeps his money 4. yeares, and a halfe, during which time A receives the rent of the Land, that is 19 li. at the end of every halfe yeare: The question is, whether this rent haue discharged the interest, and what summe B is to pay unto A. to redeeme the mortgage.

For answere of this question, set first what 19 li. per halfe yeare will amount unto, for 4 yeares, and a halfe, as is shewed in the 14 question, which will be 20048030848. or 200 li. 9 s. 7 d. then see what the interest of 475 li. forborne for the same time (namely 4 yeares and a halfe) will amount unto, which by the 8 question will be 67158426000, or 671 li. 11 s. 8 d. from which take the principall 475 li. and there will remaine 196 li. 1 s. 8 d. for the interest thereof, which if we deduct from 200 li. 8 s. 9 there will remaine 3 li. 17 s. 1 d. And so much does the rent of the Land being payd halfe yearly amount unto, more then the interest of the money, which being taken from 475 li. the summe lent, there remaines 471 li. 2 s. 11 d. which B. is to pay unto A. to redeeme his Land from mortgage.

Question

QUESTION 32.

A. and B. took each of them a Tenement by Lease for 21. years; for which they pay a like fine of 150 li. but differing rent. For A. besides his fine, payd 116 li. rent, *per Annum* by 29 li. *per* quarterly, and B. besides his fine, payd 10 li. *per Annum*, by 2 li. 10 s. *per* quarter. Now A. is desirous to take a Lease in reversion of both the layd Tenements for 27 yeares; to begin after the expiration of the aforelayd Leases of 21 yeares, and to pay onely 10 li. *per Annum*, by 2 li. 10 s. *per* quarter. The Question is, what fine is to be payd, accompting interest at the rate of 8. *per Cent. per Annum*?

The first thing to be considered in this question is, to finde what their fines payd for their Leases will augment their rents, and because they payd a like fine for like time, therefore their rents by their fines shall be alike augmented.

Therefore by the 58 question, seeke what quarterly rent for 21 yeares, will countervale 150 li. fine, and working as in that 28 question is shewed, it will appeare that 150 li. will purchase 3 li. 12 s. 8 d. *per* quarter. Therefore if this summe be added unto 29 li. (the quarterly rent payd by A.) it appeares that he payd 32 li. 12 s. 8 d. *per* quarter, and by like reason, if the same summe be added unto 2 li. 10 s. (which is the quarterly rent of B.) it appeares

that he payes 5 li. 12 s. 8 d. *per* quarter. Both which quarterly rents added together will be 38 li. 5 s. 4 d. which is the summe of the rent that is payd quarterly for both the tenements, their fines being reduced into rent. And because A. would take a Lease of both these tenements to begin after the expiration of 21 yeares, and to pay 10 li. *per Annum*, by 2 li. 10 s. *per* quarter: therefore take 2 li. 10 s. from 38 li. 5 s. 4 d. and there will remaine 35 li. 15 s. 4 d. therefore the latter part of the question is to finde the present worth of 35 li. 15 s. 4 d. *per* quarter for 27 yeares to beginne after the expiration

$$\begin{array}{r}

 \end{array}$$

piration of 21 yeares, which may bee done according to the 17
question, by seeking first what 35 li. 15 s. 4 d. per quarter is worth
for 21 yeares, and then what the same summe per quarter is worth
for 48 yeares (the yeares of the Lease in being and in reversion) and
taking the lesser from the greater, there will remaine 319 li. 19 s.
11 d. which is the present worth of the Lease in reversion as by the
worke appeareth.

QUESTION 33.

I have 8 yeares and 3-quarters yet to come of an old Lease and would take a new Lease in reversion for 21 yeares after the expiration of my old Lease, for which I am demanded 250 li. to be payd downe presently, instead whereof I offer such an annuall rent, during the 21 yeares of the new Lease, as shall countervale the sayd present fine, accompting interest at the rate of 8. per Cent. per Annum?

First see by the 6 question what 250 li. will amount unto (as if it were money forborne) in 8 yeares 3 quarters, which will be 490227735, or 490 li. 4 s. 6. then see what Annuitie, Rent, or Pension this summe will purchase for 21 yeares, and working as in the 24 question, you shall have 4894053431 or 48 li. 18 s. 9 d. per Annum, as by the worke appeareth.

The worke.

QUESTION 34

There is a Lease of a certaine house for 31. yeeres, for which the Lessee paye 120 li. fine, and 24 li. rent per Annum, by 6 li. per quarter, which street 7 yeeres and 3 quarters, by reason of some inconveniencies hee is desirous to put it off. The question is, what quarterly rent hee shall let it at, paying no line at all, by what fine hee shall take, and let it be at the same rent he payes, to make a saving bargaine, according to the law money interest at the rate of 4 per cent

First seeks what quarterly rent 120 li. will purchase for 31 yeeres which by the 28 question, will be found to be 2909094. or 29. 10 s. 2 d. per quarter. therefore the Lessee paye as good as 2 li. 18 s. 2 d. per quarter, that is 35 li. 12 s. 8 d. per Annum, and if that rent must be let the house at a, to make a saving bargaine. Now for the fine that he is to take, if he let it at the same rent, we must consider, what there is 9 yeeres and 3 quarters of the lease already expired, therefore there is but 13 yeeres and 3 quarters to come. Therefore seeks the present worth of a li. 18 s. 2 d. or 29094 per quarter for that time, and working as in the 22 question, the the answer will be 99 li. 24 s. 8 d. Therefore if this house be let for 99 li. 24 s. 8 d. per Annum payd quarterly, or take 99 li. 24 s. 8 d. fine for the remainder of the Lease, he shall cyther way make a saving bargaine.

120 li.

329090	
9573169510	
14713903	
1437804	
3166814	

And so the same question may be answered by the same way, as before, by the 28 question, which will be found to be 2909094. or 29. 10 s. 2 d. per quarter. therefore the Lessee paye as good as 2 li. 18 s. 2 d. per quarter, that is 35 li. 12 s. 8 d. per Annum, and if that rent must be let the house at a, to make a saving bargaine. Now for the fine that he is to take, if he let it at the same rent, we must consider, what there is 9 yeeres and 3 quarters of the lease already expired, therefore there is but 13 yeeres and 3 quarters to come. Therefore seeks the present worth of a li. 18 s. 2 d. or 29094 per quarter for that time, and working as in the 22 question, the the answer will be 99 li. 24 s. 8 d. Therefore if this house be let for 99 li. 24 s. 8 d. per Annum payd quarterly, or take 99 li. 24 s. 8 d. fine for the remainder of the Lease, he shall cyther way make a saving bargaine.

4182279

Then for B. by the forenamed 12 question, seeke the present worth of 16 li. *per annum*, payd by 4 li. *per quarter*. For 8 yeares and a quarter, which will be found to be worth 9678028100, then seeke what 100 li. *per annum* that is, what 25 li. *per quarter*, will amount unto, being forborne for 2 yeares and a halfe, which according to the 17 question will be 37302643925, which added to the for-

month, which is 1000000 multiplied by 379917 the product will be 38753187. or 38 753 187. and upon so much it amounts in 7 yeares 5 moneths. Then seeke what this summe, or second product will amount unto in 23 dayes, by taking the number that answeres there to in the foresayd Brevist which is 2003079, this multiplied by 387536 (casting away 2 of the figures) the product will be 38875922. From which cut off 6 figures, and there will remaine 38 li. and the figures cut off, being reduced by the 2 Probleme, will be 17 s. 3 d. as by the worke appeareth

The worke for 5 moneths.

The worke for 23 daies

$$\begin{array}{r} 1000000 \\ \times 379917 \\ \hline 7140378 \end{array}$$

$$\begin{array}{r} 88210 \quad 1003079 \\ \times 387536 \\ \hline 6018474 \end{array}$$

[Faint, mostly illegible handwritten text and calculations, possibly bleed-through from the reverse side of the page.]

The answer to this question
 At 5 per Cent. is 38 17 s.
 At 6 per Cent. is 41 14 s.
 At 7 per Cent. is 44 19 s.

If 37 li. be due at the end of 5 yeares and 7 moneths, and 23 dayes, what is it worth ready money, at compung interest at the rate of 5, 6, & 7. per Cent. per Annum?

See first what summe will pay this 37 li. 5 yeares before it be due by

by taking the number which in the Bre-
viate of discount answers unto 5 yeares,
which is 783516: this number multiplied
by 47 l. the product will be 37155203,
or 21 l. 3 s. 1 d. And so much will pay
27 l. 4 yeares before it be due.

783516
47
37155203
2167052
21555303

Then take in the Breviate that discount for months and dayes.

Then seeke in the Breviat that discoups for months and dayes, the number that answers to 7 months, which is 991940, this multi-
plied by 21552, the product will be 20561585, or 20 li. 11 s. 2 d.
Then seeke in the same Breviat for the number that answers unto
15 dayes, which is 997997, this number multiplied by 205616,
the product will be 20520475. From which cut off 6 figures, and
there will remaine 20 li. and the figures cut off being reduced
by the 2 Probleme, will bee 20 li. 10 s. 4 d. And this summe of
money will pay 27 li. 5 years, 7 months, and 15 dayes before it be
due. Interest aloud at 5 per Cent.

QUESTION 38.

If 34 li. rent payd yearly, be all forborne for 9 yeares, what will it amount unto by the end of that terme, allowing interest, at 5, 6, & 7 per Cent. per Annum?

Seeke in the Breviat of the forbearance of Annuities, Rents, or Pensions, at 5 per Cent. and therein for the number that answers to 9 yeares, which is 11026564, this number multiplied by 34 li. the summe of money named in the question the product will bee 374903176. From which cut off 6 figures, towards the left hand, and there will remaine 374 li. and the figures cut off being reduced by the 2 Problemes will be 18 s. Therefore if 34 li. rent per Annum be respited for the terme of 9 yeares, it will amount unto (rent and interest) at 5 per Cent. 374 li. 18 s. as by the worke appeareth.

11026564

44106356

33079698

374903176

18106352

12704

17624

The answer to the question

at 5 per cent. 374 li. 18 s.
at 6 per cent. 390 li. 14 s.
at 7 per cent. 407 li. 5 s.

QUESTION 39.

What is 34 li. Annuitic, Rent, or Pension, to indure 9 yeares, worth readie money, accompting interest at the rate of 5, 6, & 7 per Cent. per Annum?

Seeke in the Breviat of the discount of Annuities, Rents, or Pensions.

Pensions, at 5 per Cent. and therein for the number that answers unto 9 years which is 7107821. This number multiplied by 34 li. the product will be 241665914. From which cut off 6 figures and there will remaine 241 li. and the figures cut off being reduced by the 3 Problemes will be 13 s. 3 d. Therefore if 34 li. Annuity, Rent, or Pension be sold for 9 years, it is worth 241 li. 13 s. 3 d. as by the worke appeareth.

$$\begin{array}{r}
 7107821 \\
 \times 34 \\
 \hline
 28431284 \\
 21322463 \\
 \hline
 241665914 \\
 \end{array}$$

The answer to the question

at 5 per Cent. 341 13 3
at 6 per Cent. 331 10 10
at 7 per Cent. 321 10 10

QUESTION

What Annuity, Rent, or Pension will purchase to endure 9 years: according interest at the rate of 5, 6, & 7. per Cent. per Annum?

Seeke in the Breviat of the purchase of Annuities, Rents, or Pensions, at 5 per Cent. & therein for the number that answers unto 9 years, which is 140690. This number multiplied by 34 li. (the summe named in the question) and the product will be 4783460. From which cut off 6 figures and there will remaine 47 li. and the figures cut off being reduced by the 3 Problemes, will be 15 s. 8 d. Therefore 34 li. will purchase for 9 years an Annuity of 4 li. 15 s. 8 d. as by the worke appeareth.

$$\begin{array}{r}
 140690 \\
 \times 34 \\
 \hline
 562760 \\
 418970 \\
 \hline
 4783460 \\
 1566920 \\
 \hline
 13384 \\
 810304 \\
 \hline
 \end{array}$$

The answer to the question

at 5 per Cent. 4 15 8
at 6 per Cent. 4 19 11
at 7 per Cent. 5 4 4
